

Have other suppliers left you with a bitter taste?

Next time, try our flavor modulators

Ongoing research by Kerry and Sheffield Bio-Science™ has identified compound mixtures that can significantly affect taste perception. The result is a range of functionally specific flavor modulators intended for use in the pharmaceutical market, particularly in the consumer-driven OTC segment. Kerry's Flavor Modulator technology (fmt™) give you a pleasant tasting drug delivery vehicle with a better overall flavor and sweetness perception that could not be achieved by simply overpowering bitter APIs with flavors or sweeteners alone.

Our unique, natural flavor systems are built using components that target the sweet and bitter receptors on the tongue. This technology provides the perception of sweetness and flavor enhancement to more effectively mask bitter tastes. This is particularly important in dose forms such as tablets, chewable tablets, sachets, elixirs, and syrups for applications like pediatric and geriatric drugs.

Better Tasting Products

- Masks the bitterness created by many APIs
- Enhances product sweetness
- Improved the aftertaste of artificial sweeteners

Healthier Formulations

- Allows lower levels of sugars in a drug formula
- Makes drugs more palatable for better patient compliance
- Improved consumer acceptance by children and adults

Cost-Effective Manufacturing

- Reduces the levels of other sweeteners needed
- Lowers sugars/sweetener costs
- Suitable for multiple drug delivery systems and can be modified for different flavors

Let us customize
a natural flavor system for
your next applications
